Hako

Clean ahead

Hakomatic B 650/750 R

Compact Ride-On Scrubber Drier

Compact Ride-On Scrubber Drier

Hakomatic B 650/750 R

Work productively and comfortably while seated even in confined spaces

Due to their extreme manoeuvrability, Hakomatics can work in areas in which hand-operated tools would normally be used, thereby increasing productivity. This means that the extra investment in a ride-on vehicle soon pays dividends. The robust construction and high Hako quality levels reduce consequential costs and periods out of service and, thus, further

increase efficiency and availability. The integrated charger (Hakomatic B 750 R) enables the battery to be recharged at any power socket. Innovations, such as the Boost function for short-term increase in the scrubbing performance at the press of a button, simultaneously contribute to increased cleanliness, environmental friendliness and cost reduction.

Innovations for the highest levels of cleanliness

We are constantly working at improving our products: to ease your work loads, to reduce your operating costs and to protect the environment. Two examples of this are the Hako AquaForce and Chemical on Demand features which are available as options for the Hakomatic B 650/750 R.

Hako AquaForce

Hako AquaForce stands for thorough, environmentally friendly cleaning using demineralised water without any chemicals. In addition to providing excellent results in respect of cleaning and minimal residual dirt, you also profit from cost-savings due to greatly reduced cleaning agent consumption.

Chemical on Demand (CoD)

CoD represents a further method for increased cleanliness and environmental protection combined with reduced operating costs. Cleaning agents are only deployed when necessary by pressing the button. This means that areas which are not particularly dirty can be cleaned without the use of any chemicals.

1) Need-based cleaning

The Boost button is used to briefly activate the maximum water supply and full brush pressure. This enables the cleaning performance to be increased according to the requirements of individual situations.

2) Well-considered tank design

The large-volume tank-in-tank system enables long working times. The large tank opening simplified cleaning.

3) Short set-up times

Quick change of brushes and rollers without the need for tools.

4) Economic and environment-friendly

The plate brushes are equipped with the Hako AquaStop water retaining system to save water and cleaning agent.

5) All-round protection

Collision protection and deflecting rollers prevent damage to the machine and property particularly when working in border areas.

6) Clean, non-slip floors

The parabolic/V-shaped squeegee ensures excellent vacuuming results even when cornering and on problem floors.

7) Just one working procedure

Cylindrical brush unit with sweeping function to sweep loose dirt in a separately installed dirt hopper.

8) Simple operation

All the operating elements are quickly accessible on the clearly laid out operating panel – including the „Hakomatic button“ which starts all the cleaning functions at the press of a button. The driver has an excellent view of the working area.
