

Antibacterial Dirty Water Tanks

NEW

Thus particularly suitable for areas with high hygiene requirements. Cleaning according to HACCP concept. For example: old people's homes, clinics, large kitchens, food processing and food storage respectively.

Special synthetic material components reduce the growth of bacteria considerably.

Contract
Cleaning

Hako AntiBac

The topic of hygiene and the resulting requirements increasingly gain in importance. In conjunction with this products with antibacterial properties are becoming increasingly interesting.

In the field of contract cleaning ever more frequently the question is being discussed, as to whether the requirements of a HACCP concept (Hazard Analysis and Critical Control Points) or hygiene requirements of other critical areas can be fulfilled more easily by scrubber-driers, provided that these are equipped with dirty water tanks that prevent the possible growth of bacteria.

As an answer to this question, Hako-Werke has developed Hako Anti-Bac the antibacterial dirty water tank.

According to JIS Z 2801 (ISO 22196) in laboratory tests for the material composition chosen by Hako, there was a reduction of 99.9% in various strains of bacteria as well as moulds.

The growth of bacteria and mould in antibacterial tanks is thus reduced considerably.

The Proof:

Two prepared tanks ① without AntiBac ② with AntiBac were closed and stored at room temperature for 7 days. After this time in the Hako AntiBac tank there is considerably less growth of bacteria, mould and spores. The Hako AntiBac tank also develops significantly less unpleasant smells.

For all Hako scrubber-driers of the model ranges B 45, B 70 and B 90 Clinic version.

Advantages for you:

- Compliance with hygiene requirements = better hygiene in dirty water tank with the same cleaning effort.
- Environmental protection and cost reduction = lower consumption of disinfectant (chemicals) when cleaning tanks.
- Employee protection = reduced contact of personnel with bacteria, moulds and spores.
- In addition the CLH models have a special noise damping package (Silence Kit) for cleaning in noise sensitive areas.
